

Here's a unit I developed, that I hope others might enjoy. It consists of two mirrored subunits tethered by a horizontal ring. It borrows from Orc weave (that was my starting point) and Aura. I call it Solar Flare. All rings shown are 16 swg. Ring ARs are 7.4, 5.2, 4.7, and 3.9. I just liked the look of the "ears" (see below) in AR 4.7, but they could be AR 5.2 to eliminate a ring size. The AR 3.9 rings nestle onto the AR 5.2 rings without passing through them.

Front view (Connecting rings between units are AR 6.3.)

Back view

Side view

You can force a 4 mm bead inside it.

You can ladder it.

The connecting rings for this example continued the radiating effect (ARs 5.2 and 3.9 attached to the ears of each unit and then two AR 3.9 rings connect the units).

You get a whole different feel if you tighten the “belts” around the subunits to AR 6.9 instead of AR 7.4.

The arching orbital rings create a tunnel.

Back view. The back side is relatively flat.

This version is not Solar Flare in character. Grotto would be a better name.
